

# MOBILE PAYMENT SERVER ENABLING YOURPAY

Inside Secure's Mobile Payment Server manages the eco-system on behalf of the service provider.

## Key features

- Manages the Mobile Payment ecosystem on the Issuing bank's behalf.
- Available On-premise or as a Cloud service.
- Combines with Inside Secure's Mobile Payment Client to provide a complete Mobile Payment solution.
- Fully certified and approved.

## Schemes

Inside Secure's Mobile Payment solution enables YourPay – allowing Issuing banks (and others) to easily deploy their own "Pays". This allows them to complement their existing assets and customer relationships with **a powerful, convenient and secure Mobile Payment solution.**

## Convenient Payments

Increasingly, the benefit of providing a **seamless payment experience** is being realised. From banks using mobile payments to increase engagement with their mobile application – allowing services and products to be

connected; to merchants wanting to create the "Uber" effect.

## Managing the Ecosystem

Inside Secure's Mobile Payment Server enables the service provider **to manage their Mobile Payment ecosystem**: interacting with their customers, handling the life-cycle of customers' devices and enabling their customer support teams.

This allows our customers to build **a frictionless payment experience** into their products.

## Tokenisation

Tokenisation provides **a smooth route to deploying mobile payments**. The first use case has been tap-and-pay contactless transactions. Inside Secure firmly believes that this is only the beginning and that the real strength of Tokenisation is to power many new types of convenient payments from mobile applications.

Inside Secure's Mobile Payment Server is pre-integrated with the Token Services from MasterCard and Visa (MDES and VTS) - enabling **a rapid deployment by our customers**.

## On-premise or Cloud

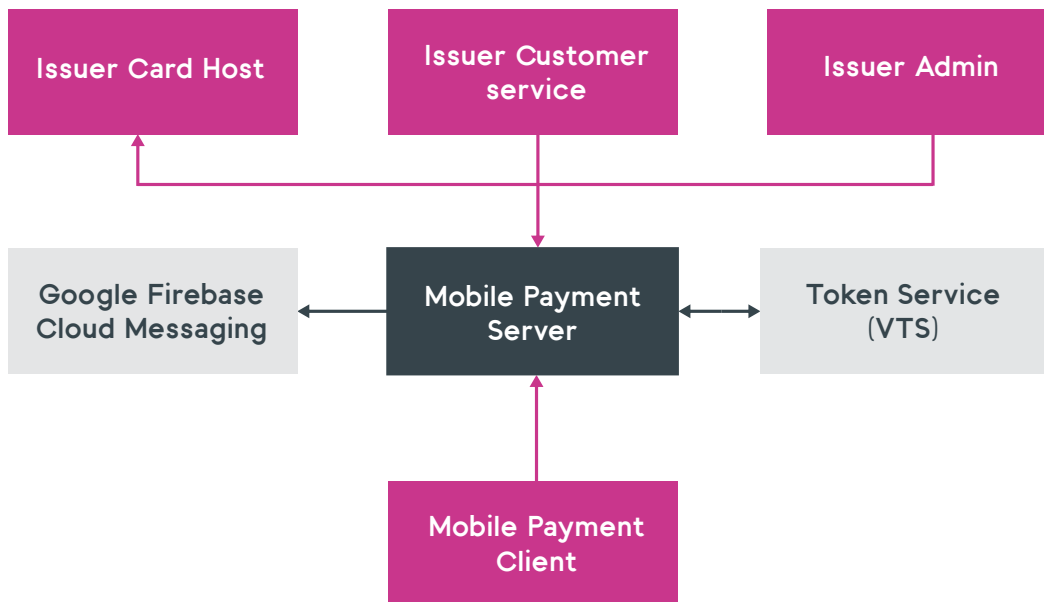

Choice is a wonderful thing. Inside Secure gives its customers the option to deploy the Server within their

own data centres – **giving them complete control**, or to connect to a Cloud service for a hands-off, fast route to market.

## Fully Certified and Secure

When handling money, it is important **to keep that money safe**. This means all the components within payment services need to be approved. Inside Secure's Mobile Payment Server has achieved all the approvals necessary from MasterCard and Visa – for functionality, integration and security. Inside Secure operates the Cloud services from within a PCI-DSS certified environment.

All this gives our customers confidence that the Mobile Payment Server **is highly secure, easy to connect to Visa and MasterCard, and rapid to deploy**.
